

**Paper Topic**  
**Philosophy 134**  
**Spring, 2007**

**Due: June 6, 2007, in class**

In the course text, there is discussion of the plausibility of systems of modal logic for representing various modalities: alethic, conditional, deontic, doxastic, epistemic, and temporal. Pick one of these modalities and explain which of the systems of Modal Sentential Logic presented in the course you think best represents the way we reason about it.

The paper should be 3 to 5 pages in length. Please confine your research to the course materials.
